Sleep disturbance scale

At Smile Team Orthodontics we believe that all of our clients (both children and adults) should be screened before they consider orthodontic treatment because our treatment recommendations may differ in the presence of sleep apnea.

What is Obstructive Sleep Apnea? Sleep Apnea occurs when the walls to the throat close during sleep, causing breathing to stop. Once the brain registers that it is not breathing, the sleeper usually wakes up, rouses and the throat opens again, then they drift back to sleep. The person effected by sleep apnea, in most cases, does not realise they have even woken. It also causes decreased Oxygen Intake. This means the brain, heart and nervous system are not receiving their required time to rest and oxygenate. The pattern can repeat itself hundreds of times every night. One of the side effects of Sleep Apnea is Cardiac Problems. Also drivers with sleep apnea have 8 times the risk of car accidents.

Sudden Cardiac Death during sleep occurs more commonly in patients who have Obstructive Sleep Apnea.

EXTRACT FROM THE BRUNI SCALE - for 16 years and under. This questionnaire will allow your orthodontist to have a better understanding of the sleep-wake rhythm of your child and of any problems in his/her sleep behavior. Answer every question; in answering, consider each question as pertaining to the past 6 months of the child's life.
